Experience with the application of ADITIZOL thermal insulation paint

VUAB Pharma a.s. has been using the ADITIZOL paint for more than 2 years as a replacement for conventional insulation materials (PUR foam, mineral wool) mainly on crystallization boilers and hot water pipes with the possibility of applying the coating during operation.

We consider the following as added value:

- stability of insulation and protective properties,
- energy saving,
- ensuring safe temperature of hot surfaces,
- significant increase in work safety,
- space saving,
- possibility of use in places with difficult access,
- possibility of permanent visual inspection.

For the above reasons, we can recommend the ADITIZOL thermal insulation and protective paint for its use.
